

## Tivoli Composite Application Manager for Applications

From application and database servers to messaging and middleware, ITCAM for Applications provides comprehensive monitoring and management capabilities for the most complex application environments, helping IT operations and administrators maintain high performance and availability levels for composite applications and services. By providing a consolidated set of tools, ITCAM for Applications can help IT organizations optimize service levels and contain costs on critical application resources across the enterprise.

Performance management solutions  
To support your business objectives

Tivoli software

**Help manage a broad set of applications with  
one integrated tool.**

**ITCAM for Applications provides monitoring support for the following:**

### **Operating system, custom application and agent less infrastructure**

ITCAM for Applications provides industry-leading availability and performance monitoring for the latest operating system environments: Microsoft Windows, AIX, Linux, HP, SUN Solaris and i5/OS.

### **Virtual server environments**

AIX LPAR, Solaris Zones, VMware, Citrix

ITCAM for Applications provides centralized monitoring and management of virtual servers equipping IT organizations with the resources to determine appropriate virtual server workload levels, and providing ITCAM for Applications provides centralized monitoring and management of virtual servers equipping IT organizations with the resources to determine appropriate virtual server workload levels, and providing visibility into CPU, memory and other key parameters per partition.

### **Web applications environments**

ITCAM for Applications provides comprehensive monitoring of performance, throughput and health of these web server applications and web servers.

### **Messaging environments**

ITCAM for Applications provides comprehensive monitoring and management of WebSphere MQ and WebSphere Message Broker with real-time metrics. It can identify problems and automate corrective actions with industry best practices and monitor key metrics.

### **Collaboration Environments**

ITCAM for Applications provides secure monitoring and management of IBM Domino servers, helping to optimize performance for IBM Lotus Notes® applications. This functionality leverages best-practice models that focus on server availability, database management, mail routing, replication, server processes and server health.

### **Database Environments**

ITCAM for Applications provides intelligent monitoring and management of database servers such as IBM DB/2, Oracle and Sybase. Out-of-the-box views show key metrics unique to each application, including buffer hits, connections used, thread activity, deadlocks and contention.

### **Applications**

ITCAM for Applications integrates the proactive monitoring and management of your enterprise resource planning (ERP) applications.

- SAP monitoring takes advantage of custom ABAP code and integration with Computer Center Management System (CCMS) to show SAP-specific monitoring data.
- Siebel CRM monitors key Siebel resources such as the application server and the gateway name server. PeopleSoft Enterprise monitors provide the monitoring capability for the entire
- PeopleSoft Enterprise including Application Servers, Process Schedulers and Tuxedo.
